

Microsoft FrontPage Picture Properties

First, to even take a look at the properties we need to pull up the **Picture Properties Window**.

1. Right-Click on the picture you would like to work on.
2. Select Picture Properties.
3. The picture properties window will open up, which looks like this.

As you notice the picture properties window has 3 tabs: Appearance, General, and Video.

In the **Appearance** tab you can edit the wrapping style (left, right, or none), layout and size of the selected.

In the **General** tab you can change the picture you would like to work on, give the picture alternate or put a direct hyperlink on the image.

In the **Video** tab you can import a video from a file, make the video repeat in a loop or loop delay play when clicked on or when the mouse rolls over it.
