

To upload a PowerPoint file to your FrontPage website, the first thing you need to do is to open your website.

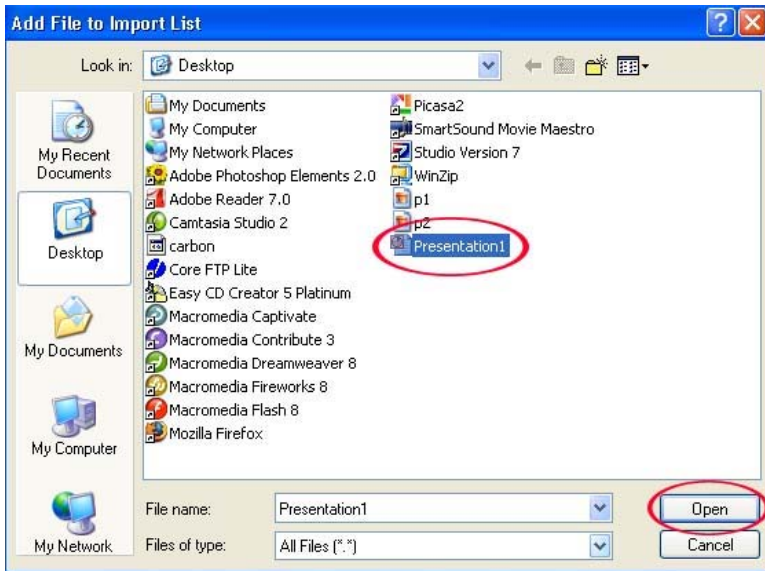

Next, go to the web page in your website where you want the PowerPoint file to be downloadable from.

Now, you need to import the PowerPoint file that you want others to be able to download. To do this, click “Import” under the “File” Menu.

In the dialogue box, click on “Add File”, then find and select your PowerPoint file in the new dialogue box and click “Open”.

Then click “OK” in the import dialogue box. Your PowerPoint file has now been uploaded to your website. To allow others to view your PowerPoint, you will need to hyperlink either a picture or text to the PowerPoint file. This is covered in the Hyperlink portion of this tutorial.
